Opposition to and questions about Pebble's science review conducted by the Keystone Center were front and center in Alaska all week. More than 125 people protested outside the meeting, urging Keystone to go back to Colorado and expressing support for the rigorous science of the EPA's Bristol Bay Watershed Assessment. Here's an excerpt from a KTVA TV story: "There is not an example on planet Earth of a mine of this type and this size that has operated and not contaminated the water," said Lindsey Bloom of Juneau, who commercial fishes in Bristol Bay. "Until we can see an example like that somewhere else, why be the experiment in Bristol Bay?"

In a widely traveled AP story, Bristol Bay Native Corp. chairman Joseph Chythlook told a Keystone panel that he suspects Pebble has already crafted multiple mine plans but won't make them public. "Keystone's process was started by the very folks who want to develop this mine. This first of all calls into question how objective this process may be," Chythlook said

More controversy swirled when Keystone removed renowned fisheries expert Dr. Daniel Schindler from the panel due to "perceived bias," even though Keystone coordinator Todd Bryan called his dismissal "extremely traumatic." In addition, a second scientist, Dr. David Montgomery withdrew from the panel, saying that he believes it's necessary to evaluate an entire mine plan, not just baseline data. The Keystone meetings continue this week.

In other media coverage, renowned Seattle Chef Tom Douglas announced his support for protection of Bristol Bay salmon at an event; *National Geographic* fellow Barton Seaver appeared on a Seattle TV show talking about why people should eat Bristol Bay salmon and why it's at risk; and best-selling author Paul Greenberg did a radio interview with NPR affiliate KPLU, predicting that Pebble-like food vs. mineral fights will become the conflict of the next 100 years.

Opponents of Alaska's Pebble mine cry foul over developer's scientific review

Lisa Demer

Anchorage Daily News, Kansas City Star, Washington Examiner, McClatchy DC, and Bellingham Herald

The group aiming to develop a giant copper and gold mine in the Bristol Bay area is vetting the scientific studies that underlie its work, turning to a Colorado-based non-profit with expertise in environmental conflict resolution. But critics of the proposed Pebble mine are having little of it...[Click here to read more](#)

Tom Douglas Sounds off Against Bristol Bay Pebble Mine

Leslie Kelly

Seattle Magazine

Do you eat wild salmon? Then, chances are you've enjoyed fish from Alaska's beautiful Bristol Bay, where massive fisheries produce roughly half of the salmon that shows up on plates around the U.S. That's one thing I learned when I showed up to a press conference yesterday at Seatown, called to discuss the threat to that habitat by the proposed Pebble Mine project...[Click here to read more](#)

Anglo American Platinum Fires 12,000 Striking Miners in South Africa

Lydia Polgreen

The New York Times

The world's top platinum producer fired 12,000 workers who refused to return to work on Friday, apparently an attempt by the company to stem the tide of wildcat strikes that have shaken South Africa's mining industry and unsettled Africa's biggest economy...[Click here to read more](#)

Pebble mine risks jobs, livelihood

Bobby Phillips Anchorage AK

Anchorage Daily News

As a commercial fisherman from Bristol Bay, I fall in with the majority out here who consider the Pebble mine to be a direct threat to our jobs and livelihoods. When I'm not fishing, I work on North Slope oil pipelines, so I'm obviously no enemy to development -- what I believe is that we need to support the industries that make sense, and protecting the Bristol Bay fishing industry makes sense for Alaska...[Click here to read more](#)
